Infection Prevention & Control	19–21		

Henry Schein's Environmental Sustainability

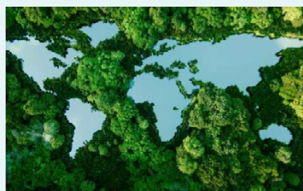

Four Areas of Action

Our global employee volunteering efforts such as beach cleanups and planting gardens and trees add value to our communities and contribute to the health of the environment in which we live and work.

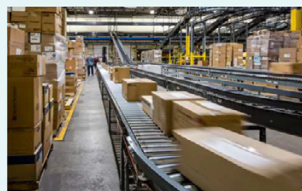

We seek to empower the health care sector with ways to reduce their environmental footprint while providing high-quality patient care. Practice Green provides customers and suppliers with products, solutions, and resources, enabling health care professionals to create a greener practice.

Supply Chain & Circularity

We focus on operational initiatives across our supply chain that contribute to a circular economy by responsibly managing our waste and water footprints.

Net Zero 2050

Guided by our science-based targets, Net Zero 2050 is a company-wide climate roadmap to significantly reduce our greenhouse gas emissions by 2030, and approach net zero by 2050.

Caring for the Environment

As climate change increases the planet's temperature, wildfires, air pollution, and the frequency and severity of extreme weather events, we each have a role to play in addressing this impact, including those working in and serving our primary health care practices.

Henry Schein continues our environmental sustainability journey in doing our part to reduce our carbon and waste footprints by continuing to enhance our data systems and methodologies, in line with our commitment

2025 GOAL #1

100% all electric lift truck fleet in U.S. Distribution Centers (DCs) with 100% high efficiency charging equipment*

PROGRESS

LIFT TRUCK FLEET GOAL ACHIEVED in 2023 with 76% high-efficiency charging equipment

2025 GOAL #2

Increase North American distribution center recycling by 10%

PROGRESS

GOAL ACHIEVED. In 2023, recycling has increased by 28.8% over 2020 metrics

2025 GOAL #3

Decrease waste sent to landfill from North American distribution centers by 5%

PROGRESS

To date, we have reduced 4.5% of waste compared with the 2022 baseline

Driven by sustainability

We're working smarter to evolve BD Sharps Disposal Solutions

Bringing you high quality products with a sharp focus on a sustainable future

BD is always searching for ways to improve the lifecycle impacts of current and future products. BD Recykleen™ Disposal Solutions are made from recycled materials.* Our goal is to maximize the recycled content in each of our products. **We are committed to moving the entire line in this direction, one step at a time.**

BD is committed to *advancing the world of health™*.

Learn more at
[bd.com/sustainability](https://www.bd.com/sustainability)

* Recycled materials with percentage between 15-100% depending on product line.

Evolution in the BD Recykleen™ Collectors brand direction

Products made to suit your clinical needs and the environment

Our goals—high quality and reduced environmental impact

We strive to use as much recycled content as possible in order to deliver high quality disposal solutions with a sharp focus on sustainability.

BD Disposal Solutions offers:

- ✓ Products that are suited to your clinical needs
- ✓ Products that incorporate recycled content

✓ Practical considerations for BD Recykleen™ Collector Products

- **Supply**—availability of recycled resin sufficient to meet the market demand
- **Performance**—same stringent performance requirements for recycled resin as those used for virgin plastic

BD Recykleen™ Sharps Containers, Cabinets, and Trolleys

BD

- Easy identification of correct waste stream for easy transportation
- Dual-opening hinge top allows variability in opening size based on department needs; locked side remains permanently locked
- Foam gasket minimizes leaks if collector accidentally tips over
- Visual, audible, tactile locks fully secure the lid to the collector to provide security against tampering

ECO PULL*

Dispenser System

NEW ECO PULL* DISPENSER SYSTEM

LESS WASTE. LESS CONTAMINATION. MORE INNOVATION.

Many common glove dispensers are wasteful and less than hygienic. More gloves than needed can come out of the box. These may fall on the floor or (even worse) they may be stuffed back in. As a box empties, users have to reach in to retrieve gloves, potentially causing glove contamination.

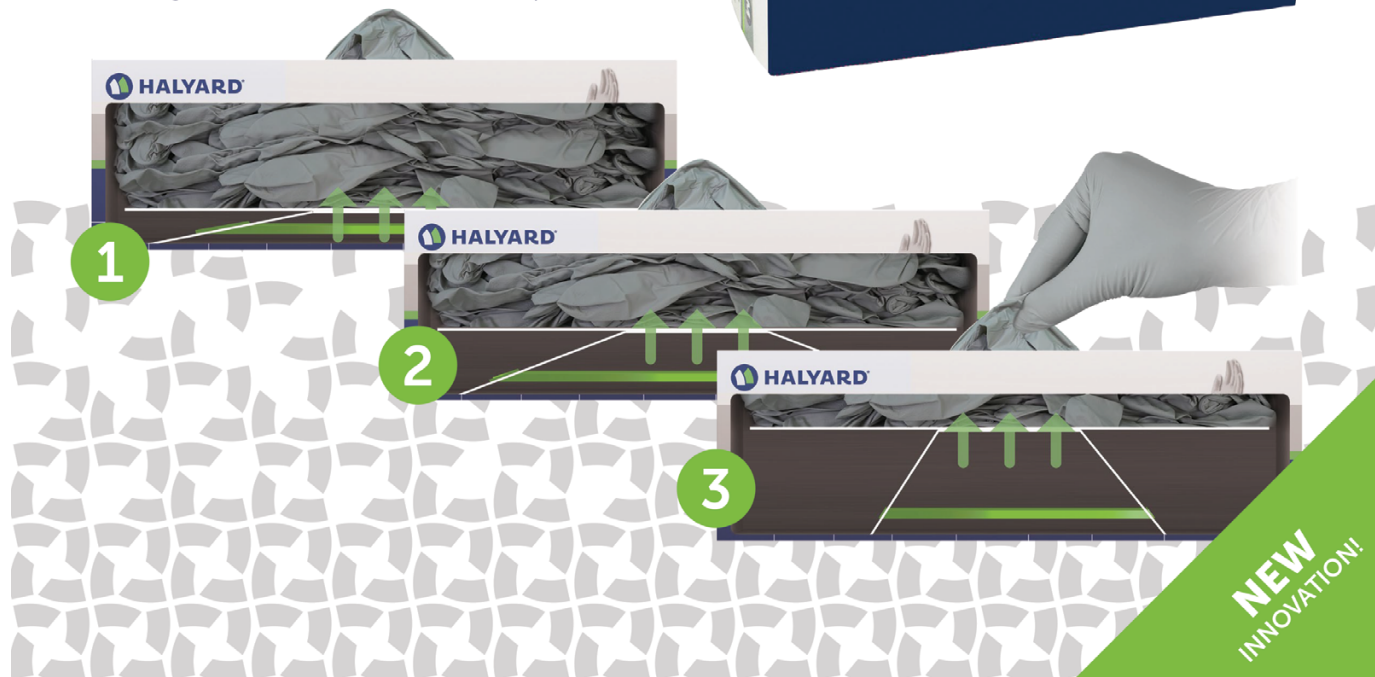

Enter ECO PULL* Dispenser System

This innovation is designed to address both waste and contamination. In fact, when compared to common glove dispensers, new ECO PULL* Dispenser System:

- Reduces multiple dispensing over 50%†
- Reduces total waste by more than 80%†

The ECO PULL* Dispenser System also reduces the transfer of contaminants from users onto gloves remaining in the dispenser. Study data shows:

- Gloves within the ECO PULL* Dispenser System exhibit nearly 50% less contamination compared to gloves in common film-covered dispensers.‡

**NEW
INNOVATION!**

ECO PULL* DISPENSER SYSTEM

HOW IT WORKS:

New ECO PULL* Dispenser System provides consistently easy access to gloves while reducing the waste and contamination risk of leading competitors' dispensers.† The ECO PULL* Dispenser System features a patent pending design that continuously lifts gloves to the top as each pair is removed – eliminating the need to reach into the box for gloves, reducing the risk of contamination.‡

KNOWLEDGE NETWORK* Accredited Education

Tools & Best Practices
Clinical Research
Commitment to Excellence

For more information, please visit:
www.halyardhealth.com

Best practice using ECO PULL Dispenser System is to gently remove each glove with forefinger and thumb to help ensure one-at-a-time dispensing and reduced contamination.*

BE PART OF THE SOLUTION, NOT PART OF THE POLLUTION

Ventyv
Outsmart Infection®

Sustainable manufacturing processes play a crucial role in addressing environmental, social, and economic challenges. The significance of sustainability spans beyond manufacturing, encompassing environmental preservation, resource optimization, and ethical practices.

Sri Trang Gloves, the manufacturer of Ventyv®, is dedicated to producing sustainable gloves. Below are key manufacturing processes to consider when evaluating gloves:

ENVIRONMENTALLY FRIENDLY MANUFACTURING

We use 100% renewable energy in the production of gloves to greatly minimize our impact to the environment.

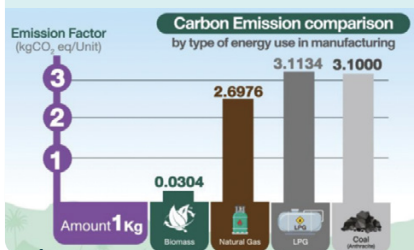

We are committed to using solar energy to reduce carbon emissions related to energy production.

Biomass is renewable organic material from plants and contains stored chemical energy from the sun produced through photosynthesis.¹

Biomass can be burned directly for heat or converted to liquid and gaseous fuels through various processes.

Biomass uniquely delivers sustainability benefits by reducing emissions and utilizing renewable energy sources in the Sri Trang manufacturing process when compared to the other types of commonly used fuels.

DID YOU KNOW?

Biomass is considered carbon-neutral when used for energy production. The carbon dioxide released during combustion is offset by the carbon dioxide absorbed by the plants during their growth, making it a more sustainable option compared to fossil fuels.³

LOGISTICS MANAGEMENT

By integrating these sustainable logistics management practices, our organization aims to minimize its environmental footprint and contribute to a more sustainable and resilient supply chain.

Shorter distances

Reduce fuel consumption

Reduce chemical use

Reduce greenhouse gas (GHG) emissions

Sri Trang Group is the world's leading fully integrated green rubber company. With over 18,500 acres of rubber tree farms, the group annually absorbs approximately 180,000 tons of Carbon Dioxide equivalent.

EMISSIONS INITIATIVES:

Sustainable Water Management

Sustainable water management involves responsibly using and conserving water resources, alongside implementing effective wastewater management systems. This ensures that present needs are met while also safeguarding ecosystems and public health.

Target to reduce water consumption intensity by **10%** from base year 2019 to 2024.

Reduce Greenhouse Gas Emissions (GHG) Scope 2

Scope 2 emissions are indirect GHG emissions associated with the purchase of electricity, steam, heat, or cooling.²

Target to reduce **10%** from base year 2019 to 2024.

Eliminate Waste

Zero Waste to Landfill by 2030.

Target to reduce by **20%** from base year 2019 to 2024.

HUMAN DIGNITY AND SOCIAL RESPONSIBILITY

We are committed to no child labor and no forced labor policies. Not only are we against all kinds of abusive workplaces, we are committed to human rights protection.

In our manufacturing facilities, we are committed to local employment, gender equality and the inclusion of individuals with disabilities in our workforce.

We have a stable workforce with a low turnover rate. Our impressive 88% employee engagement score reflects our dedication to cultivating a positive work environment.

We are committed to conducting business with transparency and fairness.

International
Labour
Organization

Sedex

amfori @BSCI
Trade with purpose

Sri Trang's tested facilities all received overall A grades on the most recent amfori BSCI audit.

Sri Trang is among the first in the glove manufacturing industry to successfully clear all eleven indicators of forced labor identified and defined by the International Labour Office (ILO)

1. <https://www.eia.gov/energyexplained/biomass/>

2. <https://www.epa.gov/climateleadership/scope-1-and-scope-2-inventory-guidance/>

3. Rubber trees have a gestation period of about 7 years, only after which time can harvesting begin. And their tapping period, during which latex can be extracted, lasts about 25 years. <https://www.sritranggroup.com/en/business/plantation>

GOOD THINGS HAPPEN WHEN YOU BLUE RENEW.*

Medical facilities across the United States are recycling their used, clean HALYARD* Sterilization Wrap as part of the HALYARD* BLUE RENEW* Sterilization Wrap Recycling Program.

O&M HALYARD IS PLEASED TO PROVIDE COMPLIMENTARY SERVICES TO HELP YOUR FACILITY:

CONNECT with local waste haulers and recyclers

EDUCATE your OR staff on the critical factors to success with the BLUE RENEW* program

ACHIEVE YOUR GOALS by sharing our recycling expertise

TRACK AND MEASURE recycling performance by providing metrics to include in your hospital sustainability report

For further information and to find out if BLUE RENEW* is available in your area,
please visit halyardhealth.com/sustainability.

Safe + Sustainable

High-Level Disinfection (HLD) of Ultrasound Probes

In its working years, a trophon® EPR device keeps patients and clinicians safe with minimal environmental impact (the only by-products of a trophon HLD cycle are oxygen and water). In a trophon EPR device's retirement, we keep 100% of the materials out of landfills.* Join us in upgrading to trophon2, and responsibly recycling your trophon EPR devices (at no charge).

HS part #: trophon2 - (142-4635)

The trophon® family includes trophon® EPR and trophon® 2 which share the same core technology of sonically activated hydrogen peroxide. *When customers return their trophon EPR devices to Nanosonics, our recycling partner, Technology Recyclers ensure that 100% of the products they recycle are kept out of landfills.

Bridging health and sustainability for a better tomorrow

At PDI Healthcare, we are not only dedicated to delivering exceptional healthcare solutions but also to protecting the environment for generations to come.

Removing 5% of plastic along with white colorant from our canisters reduces their weight and results in an annual savings of¹:

3,082
metric tons of
carbon monoxide
equivalent

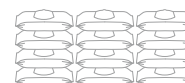

285,401
gallons of oil

150,771,617
gallons of water

up to
80%
reduction in plastic
with softpack
packaging compared
to canisters², making
shipping six times
more efficient.³

Contact your Henry Schein Rep for more info.

¹Based on 2022 forecasted volumes for the Large and Extra-Large Canisters; ²In comparison to weight of plastic for similar canister format; data on file. PDI large canisters (160 wipe count) and softpacks (80 wipe count) contain approximately the same amount in square inches of wipe material per container; ³Amount of PDI Healthcare rigid canister units sold in USA in 2023.
